## WORLD RED MEAT PRODUCTION IN 1974 INCREASED 5 PERCENT OVER 1973 LEVEL

During 1974, world red meat production in the 59 countries for which data are available rose to 70 million metric tons, 5 percent above the 1973 production level of 66 million tons. While various factors affected particular geographical areas, generally, declining domestic prices, increased feed costs, and large herd inventories resulted in increased slaughter of cattle and hogs.

Red meat production in North America reached 20.3 million tons in 1974, which was the highest production level during the 15-year period 1960-1974. From 1960 to 1974, red meat production in North America displayed two periods of decline—1964-1965 and 1971-1973. In 1972, red meat production declined as a result of reduced pork production, while during 1973 beef, veal, and pork production were down.

Comparing North American red meat production levels in 1974 with those of 1973, each country with the exception of Honduras and Nicaragua showed an increase. The United States had the largest increase.

The South American continent, a net exporter of red meat, produced approximately 300,000 tons less red meat in 1974 than in 1973. Of the two largest red meat producers, Argentina increased production by 2 percent while Brazilian production fell by 10 percent. Production levels remained fairly stable during 1974 compared with 1973 for the other countries of South America except for a decline in Colombia and an increase in Venezuela.

Red meat production in 1974 in the European Community (EC) increased by 10 percent from 1973 levels. Nearly all the increase was a result of larger beef production. France, West Germany, and the United Kingdom had the largest red meat production increases. Each of the nine member countries increased production above levels of 1973. Historically, West Germany has been the largest producer of red meat in the EC followed by France and the United Kingdom.

Other West European countries realized an 8 percent increase in red meat production during 1974. The largest gains occurred in Spain, Sweden, Greece, and Austria.

Red meat production rose by 9 percent in Eastern Europe, largely as a result of increases in East Germany, Poland, and Czechoslovakia.

In the Soviet Union, red meat production increased by 6 percent to a record level of 10.5 million tons.

In the specified African countries, red meat production continued down with 1974's production 4 percent below the level of 1973. The 10 percent reduction in South Africa was the major cause of reduced production in Africa. Production of red meat in the specified Asian countries has made great strides over the past 15 years with production rising from 1.5 million tons to 3.1 million tons. During 1974, production rose by 6 percent compared with that of 1973. The growth in Japanese red meat production is responsible for much of the growth that has taken place in these Asian countries.

Both Australia and New Zealand produced less red meat in 1974 than in 1973—17 percent and 5 percent respectively. Production reached record levels in both countries in 1972, but since then has declined.

### Beef and Veal

World production of beef and veal totaled 37.3 million tons in 1974—6 percent above 1973 production.

North American beef and veal production rose 8 percent above the 1973 production level. Increased slaughter in the United States and Mexico accounted for most of the increase. Between 1960 and 1974, beef production in North America has declined only once—in 1973. The large reduction in slaughter of both cattle and calves in the United States during 1973 accounted for the decline.

Beef and veal production in South America decreased by 5 percent during 1974 compared with production in 1973. While output increased slightly in Argentina it decreased markedly in Brazil and Colombia. Argentina and Brazil account for over 70 percent of all the beef and veal produced in South America.

EC production of beef and veal rose 20 percent in 1974 as total slaughter increased in every member country. Declining prices and near-record herd numbers influenced producers to slaughter heavily. Beef and veal production reached a 15-year high in 1974.

In the Soviet Union, production of beef and veal rose by 6 percent. Greater demand for beef in the Soviet Union has stimulated increased production and larger herds.

Production in Oceania declined during 1974. Australian production declined by 16 percent, but New Zealand production rose by 1 percent. The poor export market situation greatly influenced production decisions.

## **Pork**

World pork production rose in 1974 by 5 percent in relation to production in 1973.

Pork production in North America increased 6 percent in 1974 as output rose in the two major producing countries—the United States and Canada. In the 15-year period since 1960 the 1974 production level was second only to that of 1971.

Pork production in the EC was 4 percent higher in 1974 compared with 1973. While high feedgrain prices in North America induced hog slaughter in the second half of 1974, EC feedgrain prices, which were at times below world prices, and subsidies for sow and piglet retention kept slaughter in 1974 just slightly above the previous year's level. Otherwise, slaughter would have been higher.

In the other West European countries pork production increased by 5 percent in 1974, principally as a result of higher slaughter in Spain.

In Eastern Europe, pork production rose by 10 percent. As was the case with beef, Polish and East German contributions were the largest.

Although pork production declined in Taiwan during 1974, in other selected countries in Asia production increased—particularly in Japan.

## **Sheepmeat**

For 1974, world sheepmeat production fell by 1 percent in comparison with 1973.

In 1974, U.S. production declined by 10 percent. With the exception of 1971, sheepmeat production in North America has been declining yearly since 1961.

South American sheepmeat production rose during 1974. Argentina, Brazil, and Uruguay are the largest South American producers.

Except in the United Kingdom and France, little sheepmeat is produced in the EC. In 1974, France produced a record level, while in the United Kingdom 1974 production was the largest since 1966.

In Australia and New Zealand, sheepmeat production declined significantly as export demand for lamb and mutton fell and guaranteed floor prices for wool encouraged producers to retain sheep.

## **Horsemeat**

World horsemeat production has been on the decline since 1970. In 1974, world production fell by 15 percent compared with that of 1973.
